# 1 Exploring Graph Data Models for Timetabling Insights

This is a Quarto website.

To learn more about Quarto websites visit <https://quarto.org/docs/websites>.

## 2 Introduction

### 2.1 Intro 500 words

- Background on university timetabling challenges
- Motivation for exploring graph-based approaches
- Project scope and objectives

# **3 Data Engineering**

## **3.1 Data Engineering: An End-to-End Solution (1500-2000 words)**

### **3.1.1 2.1 Overview of the Data Pipeline**

- High-level architecture (data flow diagram)
- Key features: modularity, configurability, scalability, error handling

### **3.1.2 2.2 Extraction Process**

- Brief overview of SQL extraction techniques

### **3.1.3 2.3 Transformation and Anonymisation**

- Detailed discussion of the Python-based transformation process
- Highlight of the anonymisation function
- Discussion on safeguarding personal identifiable information

### **3.1.4 2.4 Loading to Graph Database**

- Challenges and solutions with Neo4j Aura
- Cloud vs. desktop considerations

### **3.1.5 2.5 Automation and Workflow**

- End-to-end automated process for specific programme data

### **3.1.6 2.6 Lessons Learned and Iterative Development**

- Reflection on the agile approach and discoveries made during development
- Potential future enhancements, developments

## **4 Graph Data Model**

### **4.1 Graph Data Model for Timetabling (1000 words)**

#### **4.1.1 3.1 Comparison of Relational and Graph Models**

- Visual representation of both models - mermaid, or similar

#### **4.1.2 3.2 Advantages of the Graph Approach**

#### **4.1.3 3.3 Data Augmentation Opportunities**

- Room properties example (lat, long)
- Potential for additional data integration (curriculum, student outcomes, etc.)

# **5 Timetable Metrics**

## **5.1 Timetable Quality Metrics and Insights (1500-2000 words)**

### **5.1.1 4.1 Defining Timetable Quality**

### **5.1.2 4.2 Implemented Metrics**

- Constraint violations (max hours per day, days per week, lunch breaks, etc.)
- Distance-based metrics using room properties

### **5.1.3 4.3 Aggregation Methods**

- Student-level, programme-level, and other relevant groupings

### **5.1.4 4.4 Cypher Queries for Metric Calculation**

- Example queries with explanations

### **5.1.5 4.5 Visualization of Results**

- Bloom visualisations or other relevant charts

## **6 Future Opportunities**

### **6.1 Future Opportunities and Potential Insights (500 words)**

- Discussion of potential analyses (module combinations, student clustering, etc.)
- Integration of additional data sources

# 7 Conclusion

## 7.1 Conclusion (500 words)

- Summary of key achievements
- Reflection on the project's impact and potential for timetabling processes
- Future work and recommendations

## 8 References
